[Overview](#) | [Pricing/Components](#) | [Geometry/Sizing](#) | [Larger View](#)

The BottleRocket was designed as an answer to a new progression in trail building and freeriding. Trails are starting to look more like big mountain slopestyle parks with big gap doubles, wall rides and berms that emphasize style and flow. The mid travel of 5.5" is just enough travel for the big stuff without slowing you down. The geometry is designed with a low bottom bracket, short chain stays and super sloped top tube to make this bike extremely agile and easy to throw around for tricks. The BottleRocket also features a one-piece CNC'd rocker that makes the rear end incredibly laterally stiff for cornering and pedaling hard.

Frame Features:

140mm (5.55") Rear Wheel Travel (with 7.875" x 2.25" rear shock) / 127mm (5") Rear Wheel Travel (with 7.875 x 2" rear shock)

Manitou Swinger Coil 4-Way Shock (Rebound, Preload, SPV, Bottom Out Resistance adjustments).

Marzocchi Roco, Fox DHX air and coil and Romic Double Coil Shocks are also available.
